STORE GUIDE

Vayora Tickets — online

How to set up your store, import products, scan, and print shelf and promo tickets with tickets.vayora.au.

Updated October 2026

What Vayora Tickets does

Vayora Tickets prints shelf price tags and promotional tickets with scannable barcodes, from your product list, on any normal office printer. It runs in your web browser at **tickets.vayora.au**, so there's nothing to install.

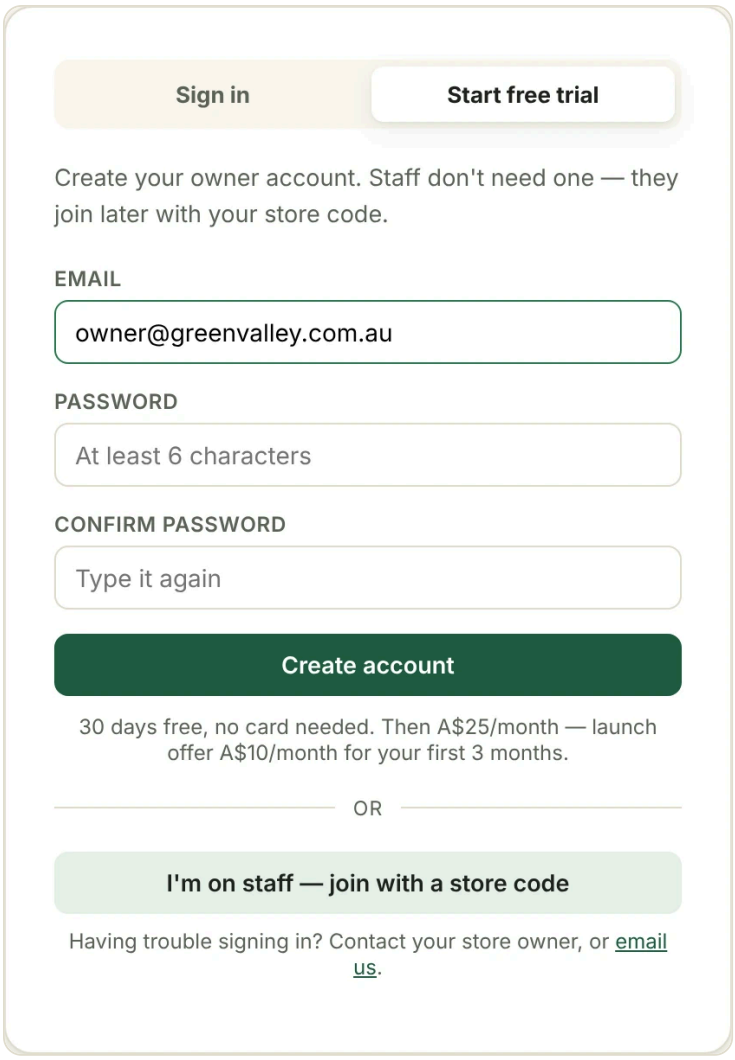

Your catalog, print queue and saved batches are stored online and sync live. Staff can scan products on their phones while you print from the computer in the back office.

What you need

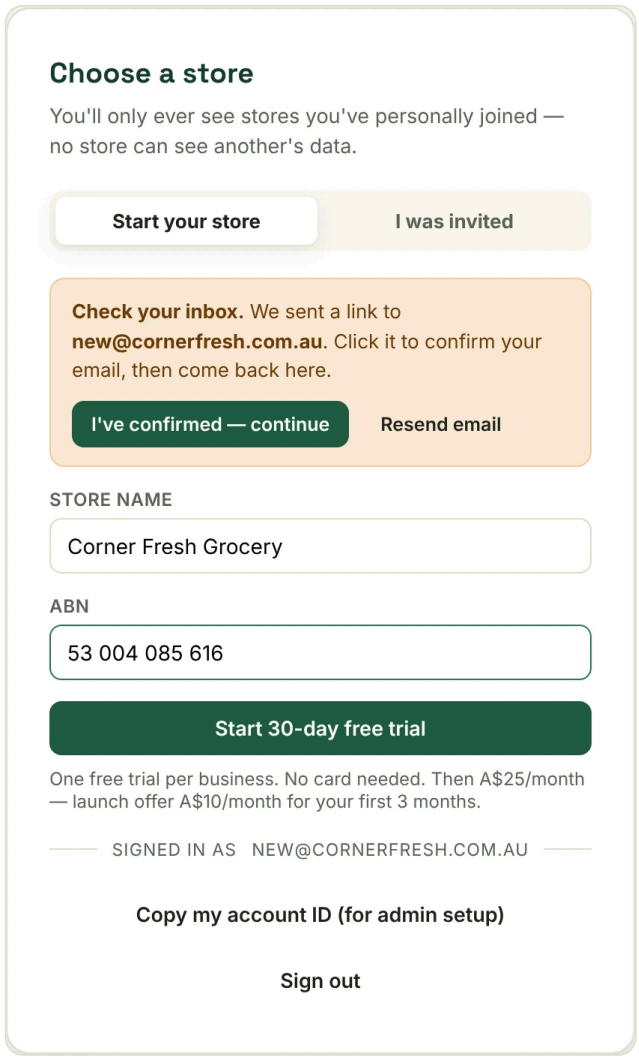

- A computer with Chrome, Edge or Safari, and a printer that prints A4.
- Your product list as an Excel or CSV file. Most POS systems can export one.
- Optional: a USB or Bluetooth barcode scanner, or just your phone's camera.
- Optional: pre-cut shelf ticket sheets such as Vision Supply or POS'99. Plain A4 works too.

Start your free trial

1. Go to **tickets.vayora.au** and choose **Start free trial**.
2. Enter your email and a password (at least 6 characters), then click **Create account**.
3. Open the email we send you and click the confirmation link. Back in the app, click **I've confirmed — continue**.
4. Enter your **store name** and **ABN**, then click **Start 30-day free trial**.

Create your owner account.

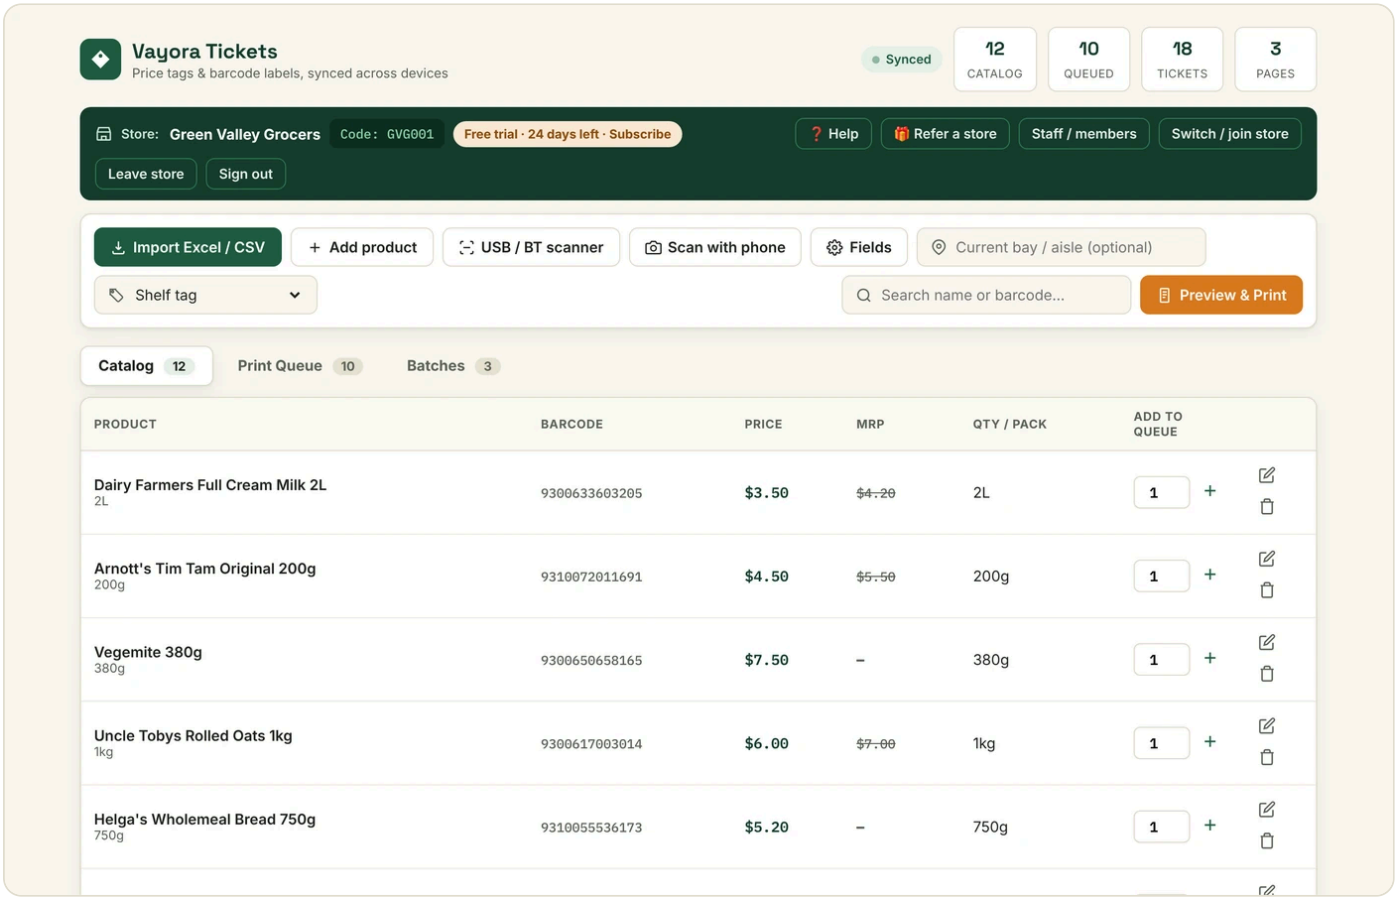

Confirm your email, then name your store.

Good to know: the trial is free for 30 days and needs no card. There's one free trial per business. If you were sent a **referral link** by another store, your trial is 60 days.

Next time, just open **tickets.vayora.au** and sign in. Forgot your password? Use **Forgot your password?** on the sign-in screen.

A quick tour

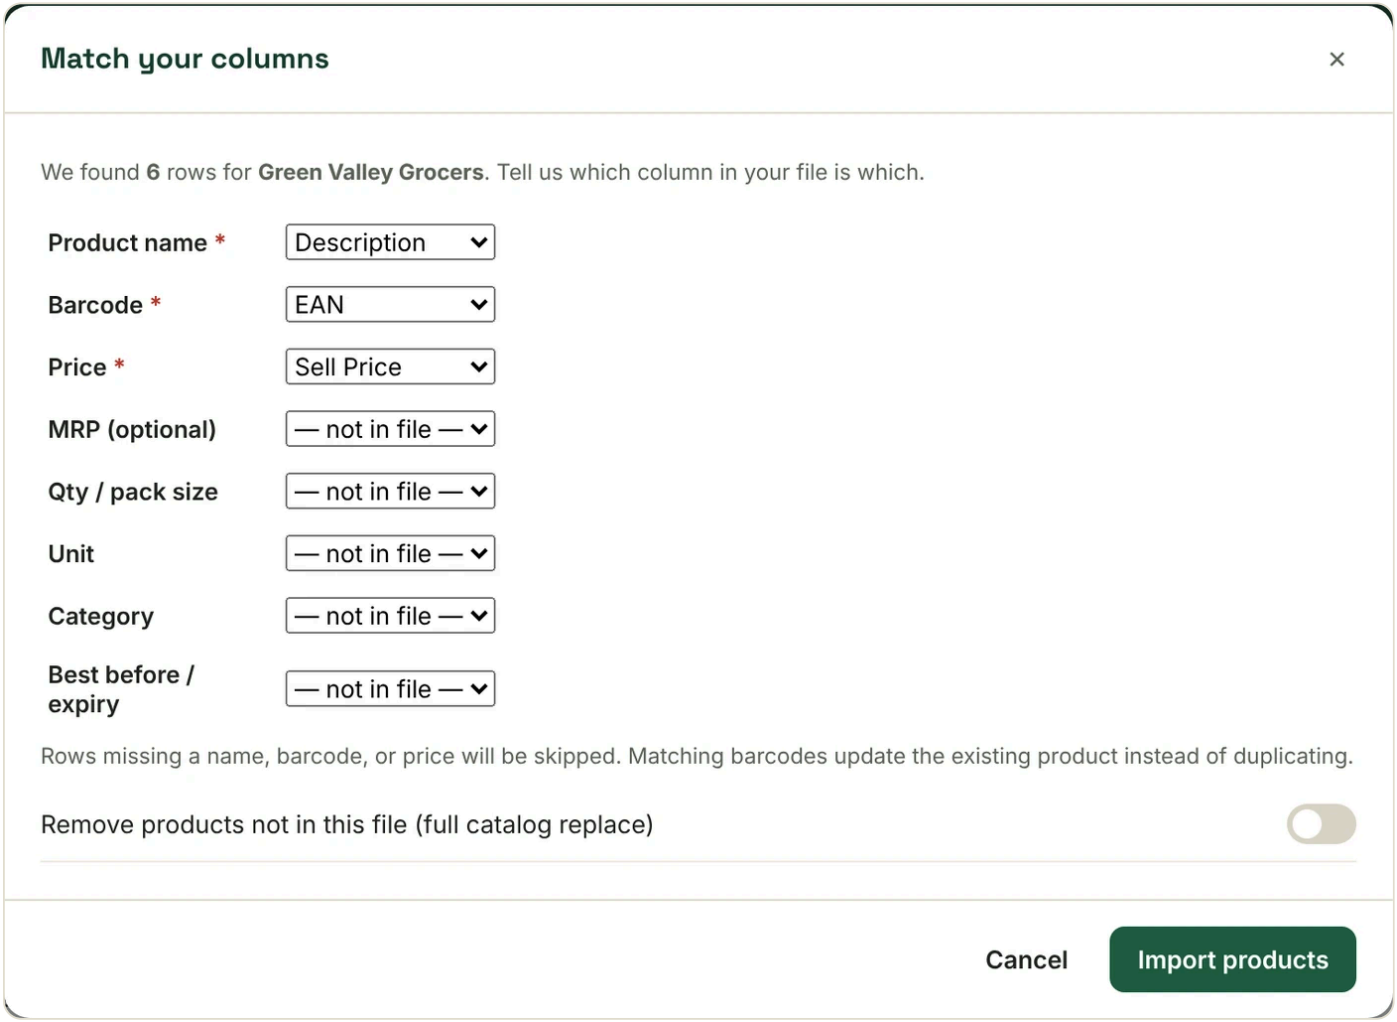

The main screen: your store bar, the toolbar, and the Catalog, Print Queue and Batches tabs.

PART	WHAT IT'S FOR
Store bar (dark green)	Your store name and **store code** (staff use it to join). The trial / subscription badge, **❓ Help**, **🎁 Refer a store**, **Staff / members**.
Toolbar	Import a product file, add a product, scan, change ticket fields and paper, choose the ticket type, search, and **Preview & Print**.
Catalog	All your products. Add any of them to the print queue with **+**.
Print Queue	The tickets you're about to print, with copies, bay/aisle and promo details.
Batches	Print runs you've saved to reprint later.
Counters (top right)	Products in the catalog, rows queued, tickets and pages to print.

Add your products

Import an Excel or CSV file

1. Export your product list from your POS or supplier as Excel (.xlsx) or CSV. It needs at least a **name**, **barcode** and **price** column.
2. Click `Import Excel / CSV` and choose the file.
3. Check the columns are matched correctly (most are matched automatically), then click `Import products`.

Tell the app which column in your file is which.

- Products whose barcode is already in your catalog are **updated**, not duplicated. Re-importing your price file each week keeps prices current.
- Rows without a name, barcode or price are skipped.
- **Remove products not in this file** is for a full catalog replacement. Leave it off for partial updates.

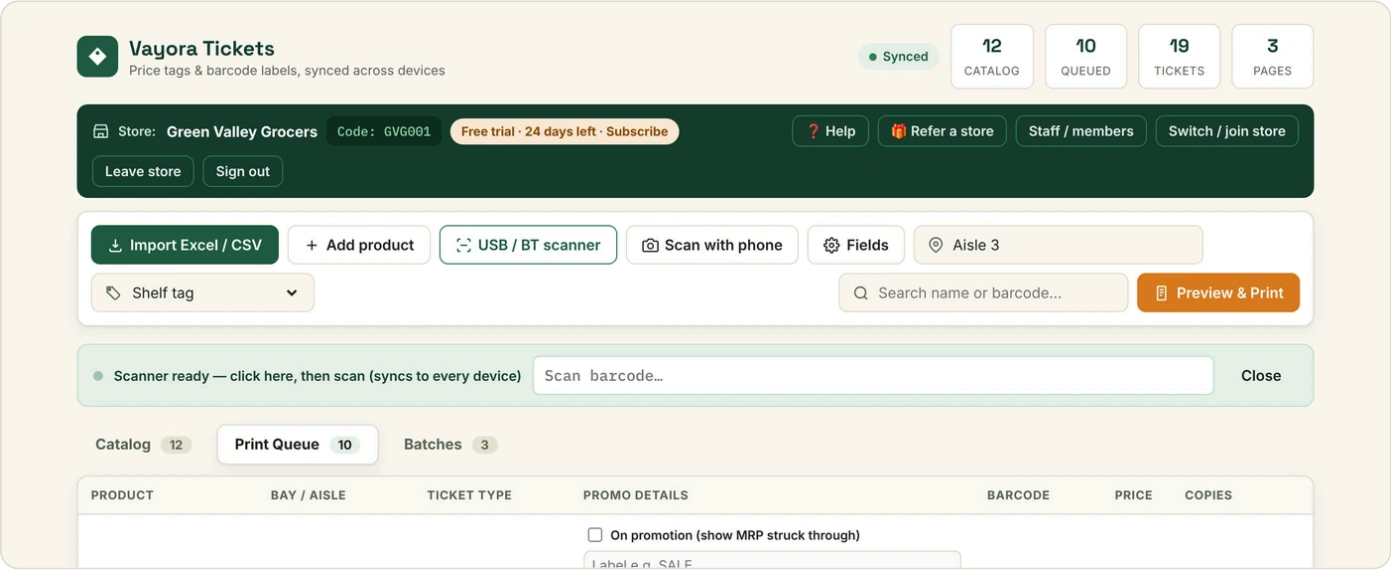

Add a product by hand

Click `+ Add product`, fill in the name, barcode and price (plus anything else you want on the ticket), and save.

Build your print queue

Everything you want to print goes into the **Print Queue** first. There are three ways to add to it:

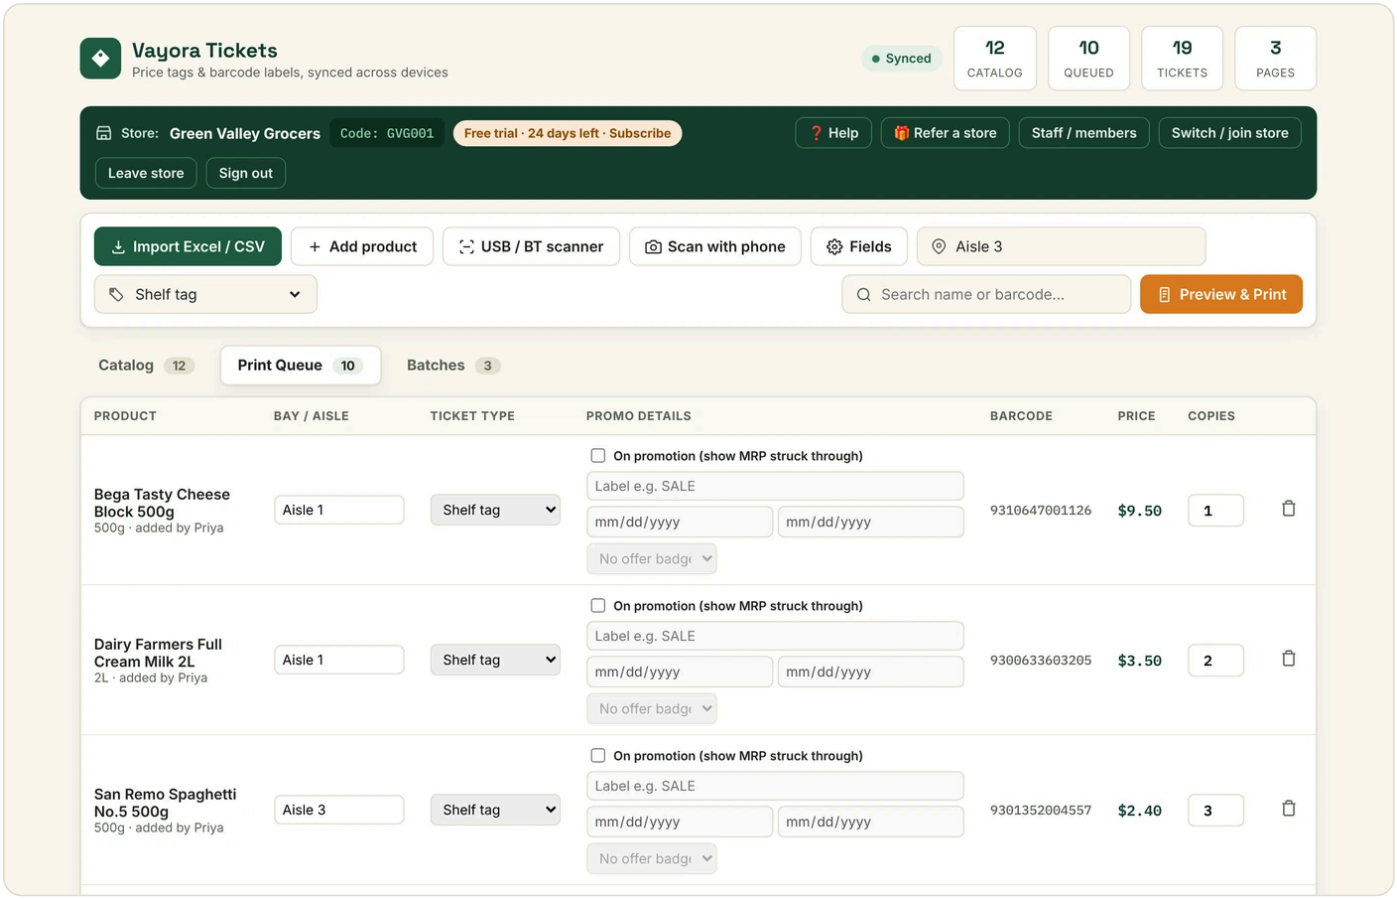

- **From the catalog:** set the number of copies and click + next to the product.
- **USB or Bluetooth scanner:** click `USB / BT scanner` and scan. Each scan adds one ticket, and scanning the same item again adds another copy.
- **Phone camera:** click `Scan with phone`, point the barcode inside the box and tap `Tap to Scan`.

With the scanner bar open, every scan lands in the Print Queue, tagged with the current bay/aisle.

> **Tip:** type a location into **Current bay / aisle** before you start scanning a section. Every scanned ticket is tagged with it, and the queue is sorted by aisle, so the printed tickets come out in walking order.

Scanned a barcode that isn't in your catalog? The app opens the Add product form with the barcode filled in. These products are also listed under `New from scanning`, which you can export to add them to your POS.

The Print Queue: change the bay, ticket type, promo details or copies on any row.

Promo tickets and offers

Ticket types

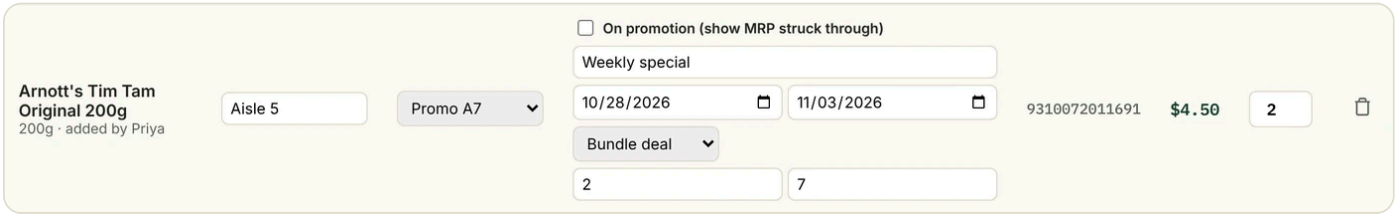

TYPE	SIZE	USE IT FOR
Shelf tag	Fits your chosen paper (e.g. 3×8 on plain A4, or a pre-cut preset)	Everyday shelf prices
Promo A7	74×105mm, 8 per A4 (landscape)	Specials on the shelf edge
Promo A5	148×210mm, 2 per A4	End-of-aisle and display specials
Promo A4	Full A4 page	Window, counter and front-end signs

Choose the type in the toolbar before adding items, or change it for any row in the Print Queue.

Setting an offer

Each promo row in the Print Queue has these **promo details**:

- **Offer type:** *% off* (e.g. 20% OFF, shows the was/now price), *Special price* (NOW $4.00), *Bundle deal* (2 FOR $7.00) or *Custom text* (e.g. HALF PRICE).
- **Label:** a small tag such as "Weekly special".
- **Sale dates:** printed as "Valid 28 Oct – 3 Nov".

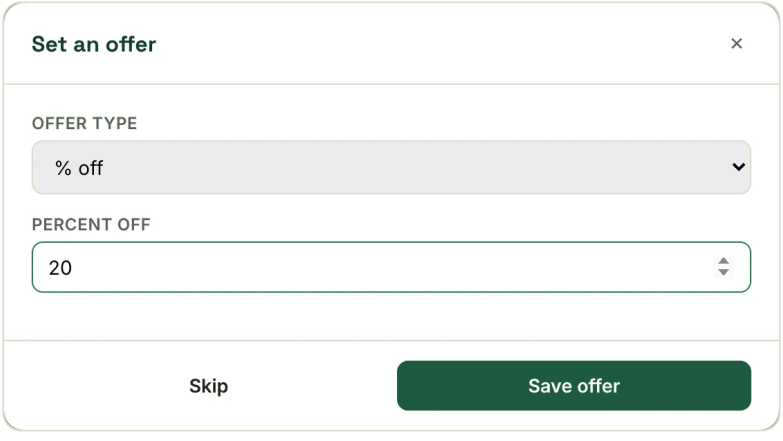

Promo details on a queue row: label, sale dates and a bundle deal.

Scanning a whole promotion? Choose the promo type in the toolbar and tick **Ask for offer on each scan**. After every scan, a small box asks for the offer.

Promo type selected, "Ask for offer on each scan" ticked.

Set the offer straight after the scan.

Promo A7: eight tickets on a landscape A4 sheet. Cut along the dashed lines.

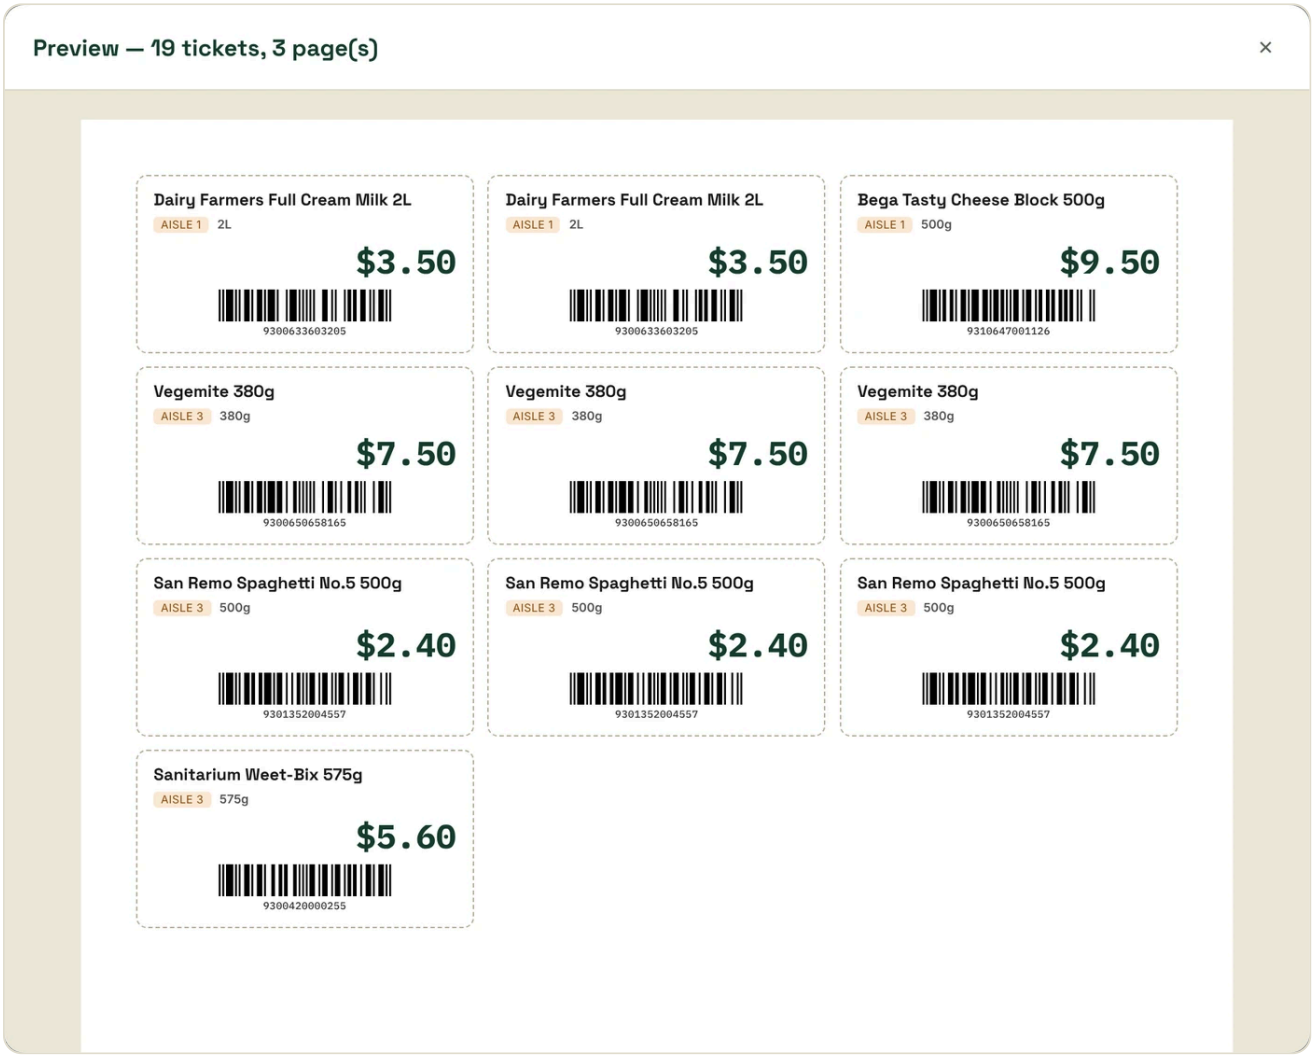

Promo A4 with a custom offer, label and sale dates.

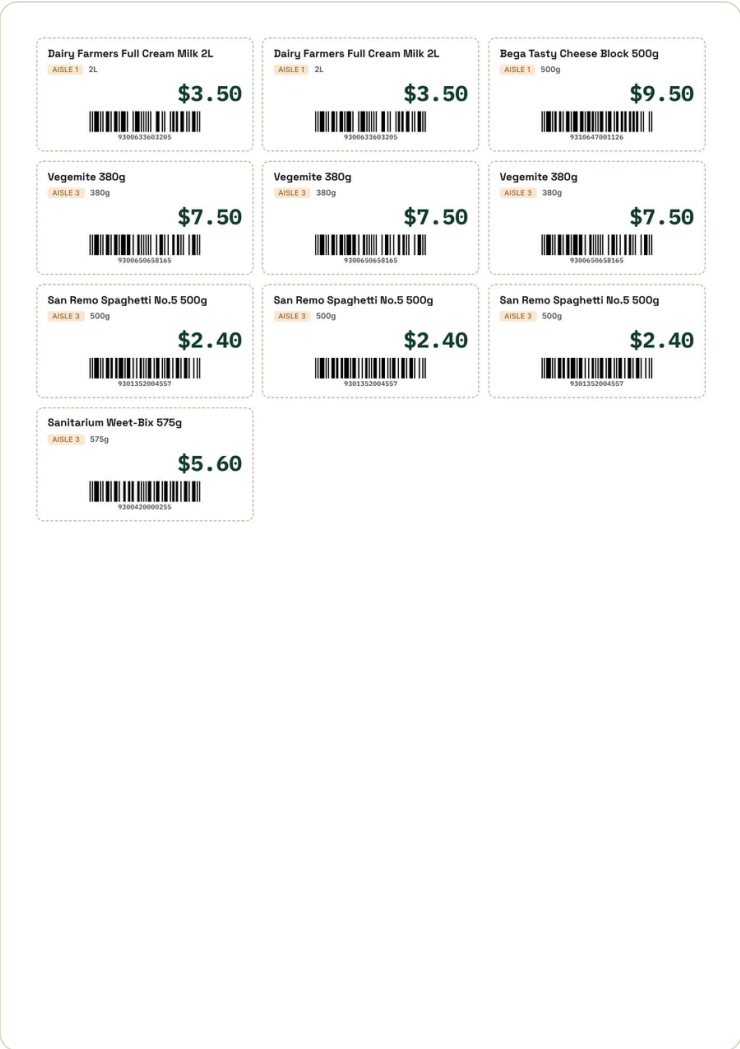

Need a list of this week's offers for your POS or staff? With promo tickets in the queue, use **Export offers CSV** or **Export offers Excel** under the Print Queue.

Preview and print

1. Click **Preview & Print**. You'll see exactly how the sheets will print, with the number of tickets and pages.
2. Click **Print now**.
3. In the print window, choose your printer, **A4** paper, and scale **Default** or **100%**. Don't use "Fit to page". Then print.

The preview shows every page before you print.

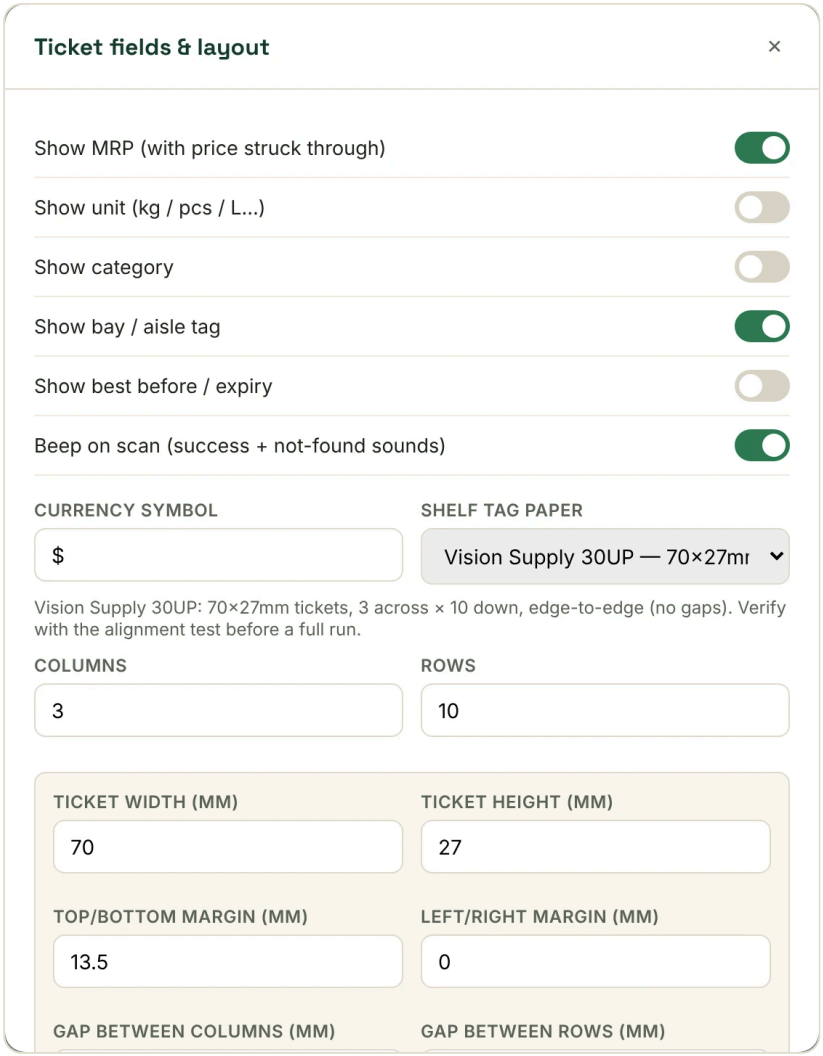

Shelf tags on plain A4. Long product names shrink automatically to fit.

Barcodes not scanning? They're printed at true size so POS scanners can read them. Printing at "Fit to page" or a shrunk scale makes them too small, so always print at 100%.

Choose your paper and fields

Click **Fields** to choose what appears on shelf tags (MRP struck through, unit, category, bay/aisle, best-before) and which paper you print on.

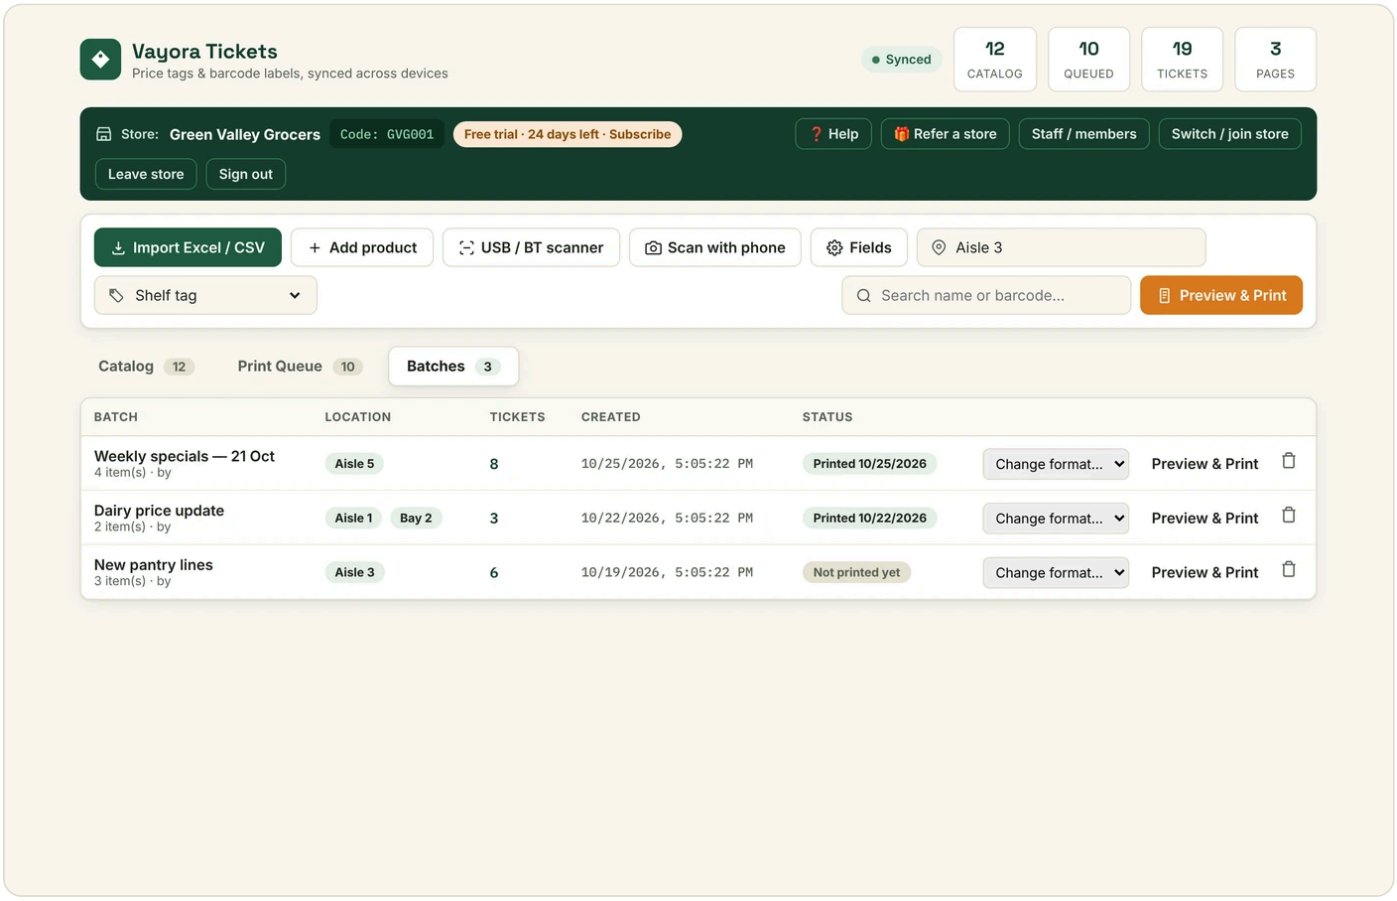

Ticket fields & layout, with a pre-cut paper preset selected.

- **Plain A4:** set columns × rows (e.g. 3 × 8) and cut the tags yourself.
- **Pre-cut sheets:** choose your stock (Vision Supply 24UP/30UP/33UP, POS'99 33UP) or **Custom** to enter your own measurements.
- With pre-cut stock, print 🖨️ **Print alignment test page** first and hold it against a real sheet up to the light. If everything is the right size but slightly off, adjust **nudge right / nudge down** by a millimetre or two.

Save and reprint batches

Once your queue is ready, click **Save as batch** under the Print Queue. Give it a name (e.g. "Weekly specials — 21 Oct") and, if you like, an aisle, bay or zone. Usually the queue is cleared afterwards so you can start the next run.

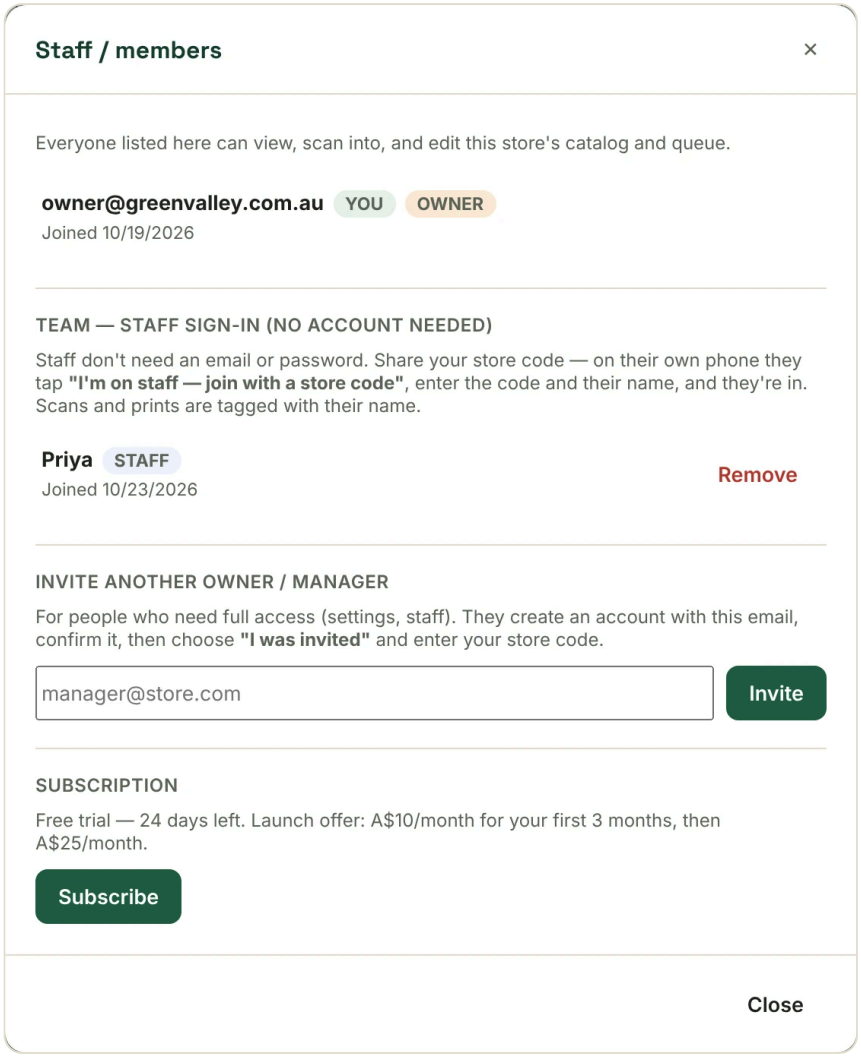

Saved batches, marked once printed.

- **Preview & Print** on a batch reprints it any time, and marks it as printed.
- **Change format…** switches every ticket in a batch to another type, e.g. reprint your A7 specials as A4 signs.

Staff and managers

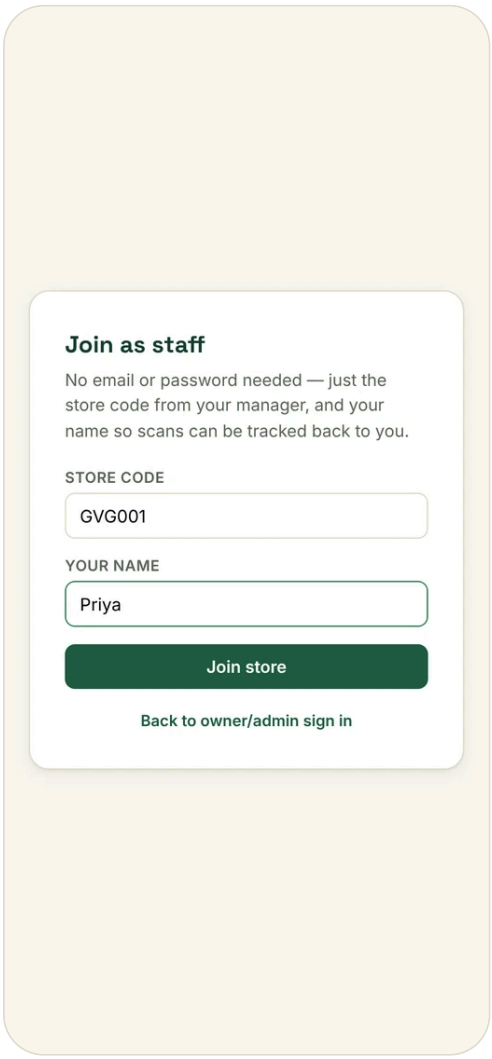

Click **Staff / members** to see who has access to your store.

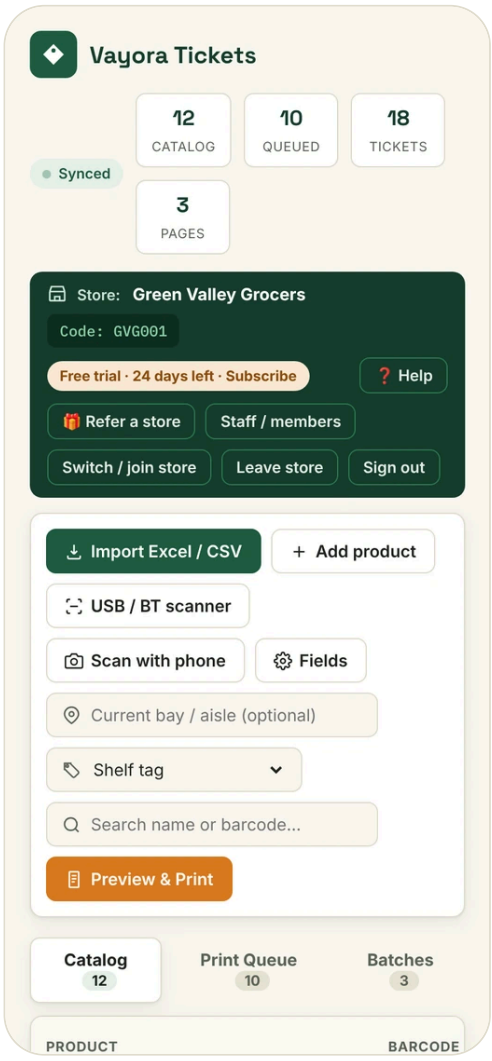

Staff / members: your team, invitations and your subscription.

Staff (no account needed)

1. Give staff your **store code**, shown in the store bar (e.g. GVG001).
2. On their phone or computer, they open **tickets.vayora.au**, tap **I'm on staff — join with a store code**, and enter the code and their name.
3. Their scans and prints are tagged with their name. To remove someone, click **Remove** next to their name.

Joining as staff on a phone.

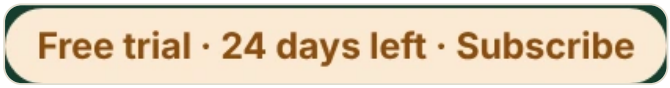

The app works on phones too, which is ideal for scanning on the shop floor.

Managers and co-owners

For someone who needs full access (settings, staff, subscription), enter their email under **Invite another owner / manager**. They create an account with that email, confirm it, then choose `I was invited` and enter your store code.

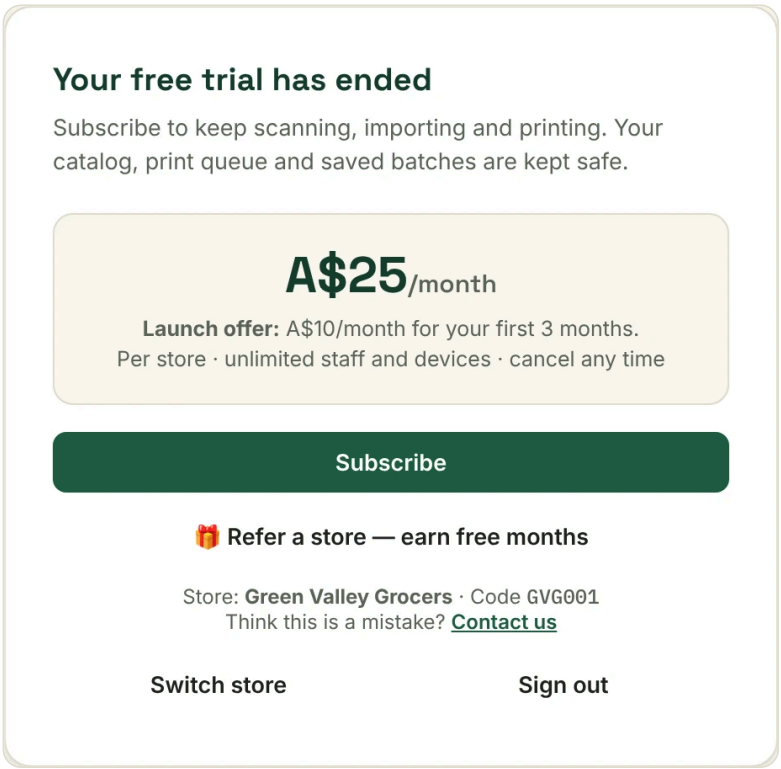

Your subscription

The badge in the store bar shows your plan, e.g. **Free trial · 24 days left · Subscribe**.

WHEN	PRICE
First 30 days	Free, no card needed
Next 3 months	A$10/month (launch offer)
After that	A$25/month per store: unlimited staff, devices and tickets

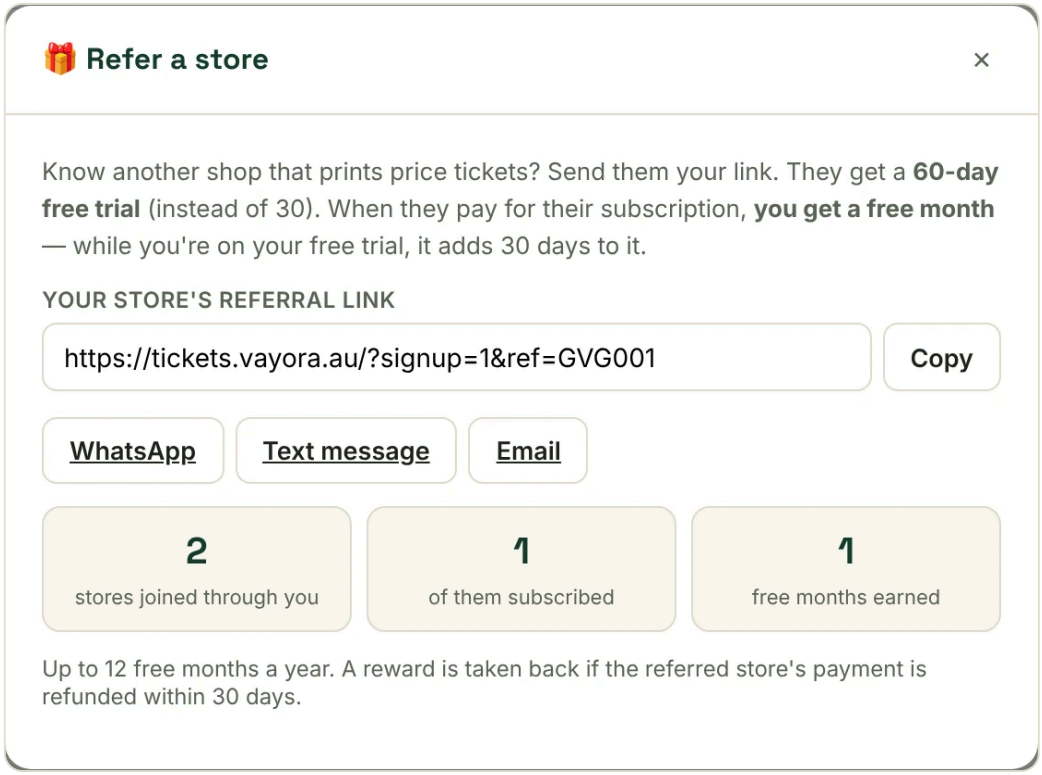

- **Subscribe:** click the badge (or `Subscribe` in Staff / members) and pay on Stripe's secure page. The store unlocks within seconds.
- **Manage:** once subscribed, the badge says **Subscribed · Manage**. Click it to update your card, download tax invoices or cancel.
- **Cancelling** keeps access until the end of the period you've paid for.
- If the trial ends without a subscription, the app shows the payment page. **Nothing is deleted**: your catalog, queue and batches are all there when you subscribe.

The payment page after the trial.

Refer a store

Know another shop that prints price tickets? Click **🎁 Refer a store** and send them your link by WhatsApp, text message or email.

Your referral link and how many stores have joined.

- They get a **60-day** free trial instead of 30.
- When they pay for their subscription, **you get a free month**. It comes off your next bill, or adds 30 days if you're still on your trial.
- Up to 12 free months a year. A reward is taken back if the referred store's payment is refunded within 30 days.

Troubleshooting

Barcodes won't scan at the register

Print at **100% / Default** scale, not "Fit to page". Check the barcode in your product list is the full number on the pack (usually 13 digits). Very worn toner can also cause it.

Tickets don't line up with my pre-cut sheets

In **Fields**, check the paper preset matches your stock, print the alignment test page and hold it against a sheet. Use the nudge fields for small shifts. Printers differ by a millimetre or two, which is normal.

A long product name is cut short

Text shrinks automatically to fit. On very small tags, the name is limited to two lines. Shorten the name in the catalog if you need all of it, or use a bigger ticket type.

Staff can't join

Check they're entering the store code exactly as shown in your store bar, and choosing "I'm on staff" (not signing in with an email).

I didn't get the confirmation email

Check your spam or junk folder, then use **Resend email**. Make sure you signed up with the right address.

My store opened on the payment page straight away

Free trials are one per business. If your ABN, account, device or internet connection has already had a trial, a new store starts on the subscription. If that's a mistake (e.g. a shared office connection), email us and we'll sort it out.

Can I use it on more than one computer or phone?

Yes. Sign in (or join as staff) on any device. Everything syncs live.

Still stuck? Email vayora.ai@gmail.com with your store code and a screenshot.

Quick reference

TO...	DO THIS
Load products	Import Excel / CSV → match columns → Import products
Update prices	Import your new price file. Matching barcodes are updated.
Queue tickets	Catalog ＋, USB / BT scanner, or Scan with phone
Make a special	Ticket type Promo A7/A5/A4 → set the offer, label and dates in the Print Queue
Print	Preview & Print → Print now → A4, 100%
Use pre-cut sheets	Fields → Shelf tag paper → print the alignment test
Reprint later	Save as batch → Batches → Preview & Print
Add staff	Give them the store code → "I'm on staff"
Subscribe / manage billing	Click the plan badge in the store bar
Get help	❓ Help in the store bar, or vayora.ai@gmail.com
